

RESOLUTION # 4-22800

SANDING IN SUBDIVISIONS

Policy adopted by the Town of Hull Board establishing guidelines for the sanding of roads within subdivision.

1. Sanding is appropriate when icing conditions exist.
2. Sand used in the Town of Hull is a mixture of sand and salt (approximately 8-1 ratio).
3. Sanding in subdivisions shall be focused on intersections, corner, and hills.
4. Other roads within the subdivision may require sanding if severe icy conditions exist.
5. Moderation in the application of sand shall be a consideration.
6. This policy recognizes that on site road conditions can best be judged by the snow plow driver. Therefore some discretion exists in the application of sand.
